1. WHAT ARE EXPANSION JOINTS?

All buildings and their structural elements are subject to stresses which cause movements, deformations and dimensional changes.

THESE STRESSES ARE CAUSED BY THE FOLLOWING REASONS:

- Thermal changes in the environment.
- Expansion and contraction of constructive elements.
- Settlements and movements of the ground
- Seismic movements.
- The use.
- Wind pressure.
- Loads and traffic.

To control and prevent these stresses, the medium and large buildings are built by blocks, so that each block works individually and does not hit the adjacent block.

Between these blocks some spaces are left as expansion joints. The location and width of these spaces are determined by structural engineers, who also will determine the load capacity of the profile selected.

An expansion joint is a space that crosses the whole structure of the building: floors, walls, facades and ceilings.

The structural expansion joints absorb the movements of the building to control and prevent from the apparition of different pathologies in the structure. They also isolate the encounters between different structural elements such as walls, pillars, sinks, etc., avoiding the transmission of stresses between them.

Do not install expansion joints, use an improper joint system or distribute them incorrectly can cause all kind of pathologies in the structure or the building finishes. Once the construction is finished these pathologies will be very difficult to solve and will result in a high maintenance cost. Instead, solving adequately the encounters and critical elements in the building identifies a good project.

The profiles for expansion joints are installed in all kind of projects, specially in airports, malls, hospitals, schools, parkings, industrial buildings, factories... given their features and dimensions. These profiles generally consist of aluminum profiles with a rubber insert or are systems entirely made of metal. Their function is covering the expansion joint gap to allow the free movement of the blocks without causing damage in the concrete or the tiling.

WHAT IS A STRUCTURAL JOINTS SYSTEM AND WHY INSTALL IT?

The Structural Joints System is an assembly designed to be installed in structural expansion joints consisting of three independent elements:

1. **Structural joint profile (Novojunta® Pro)**
2. **Novomembrana EPDM**
3. **Firestop cord**

Its function is to resolve the joints in such a way that they are integrated into the building, enabling safe traffic, absorbing movements of the structure safely and protecting the installation against damp and the passage of flames in the event of fire.

Solving the structural joint using a suitable profile is a sound technical solution that will enable the building to move freely, thereby preventing the appearance of pathologies. Yet the passage of damp and steam, or the passage of flames and smoke in the event of fire can cause serious pathologies and even affect occupants' health. Not to take all such factors into account could mean that the most technical profile does not fulfil its function.

For this reason, it is recommended to install a complete Structural Joints System from the start, thereby helping to comply with safety regulations in the event of fire and preserving the state of the installation, avoiding the high costs of intervention or maintenance once the works have ended.

WHERE TO INSTALL THE STRUCTURAL JOINTS SYSTEM?

The EMAC® Structural Joints System can be installed in all types of project where structural joints are employed. It is an element that is typically present in large projects such as airports, shopping centres, hospitals, education centres, parking facilities, industrial buildings, etc.

THE EXPANSION JOINTS CAN BE CLASSIFIED AS FOLLOWS:

ACCORDING TO ITS INSTALLATION:

- Overlapped, on the floor
- Flush with the flooring, at level

ACCORDING TO THE LOAD SUPPORT:

- Light
- Medium
- Semi-heavy
- Heavy-duty

2. WHAT DO YOU NEED TO CHOOSE THE ADEQUATE EXPANSION JOINT?

FUNDAMENTAL QUESTIONS TO BE RAISED:

1. What kind of installation do you need?

- Flush to the flooring
- Overlapped (finished floorings)

2. What is the width of the expansion joint?

3. What is the necessary height? (for flush to flooring joints)

4. What is the necessary load support?

LIGHT LOADS:

MEDIUM LOADS:

SEMI-HEAVY LOADS:

HEAVY-DUTY LOADS:

BEAR IN MIND:

EMAC® structural joints have accessories that are specially developed to ensure the joint's passive safety, using firestop cord or augmenting the waterproofing of the support using EPDM membranes. The use of such accessories is highly recommended and, in some cases, essential. Consult our information with no obligation.

ADVICE AND TECHNICAL STUDY WITHOUT OBLIGATION

Our technical team is at your total disposal to solve your questions or to facilitate the technical info you need: technical files, constructive details in cad format, installation instructions...

If you prefer, send us your drawings and we will give you technical advice about recommendable distribution of the movement joints in your project.

4. FLUSH WITH THE FLOORING WITH ELASTIC INSERT

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

NOVOJUNTA® PRO BASIC SLIMM

- System of profiles up to 40 mm width suited to be installed in low ceramic thickness like vinyl flooring or carpets among others.
- Two aluminium profiles with holes for the fixing screws and a central part made of high quality synthetic rubber that it is inserted into the aluminum profiles.
- Replaceable rubber insert supplied in rolls.
- Delivered unmounted
- Safe and easy fixing thanks to the perforated profiles and the fixing screws.
- 3 rubber widths available (20, 30 y 40 mm / 0.78", 1.18", 1.57")), flat or striated.

TYPE OF RUBBER

RUBBER COLOUR

MATERIALS AND TECHNICAL DETAILS

- Aluminum profiles drilled on the base for the fixing screws.
- High performance rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Profiles delivered in 2.5 m. length (98.42")
- The rubber insert is delivered separately
- The whole system includes all the fixing screws**

NOVOJUNTA® PRO BASIC

- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- For joint widths up to 40 mm (1.57")
- Movement allowed up to 14 mm (0.55")
- Replaceable rubber insert
- Delivered unmounted
- Safe and easy fixing thanks to the perforated profiles and the fixing screws.
- 5 heights available: 12, 5, 22, 40, 50 y 80 mm (0.49, 0.86, 1.57, 1.96, 3.14")
- 3 rubber widths available (20, 30 y 40 mm / 0.78", 1.18", 1.57"), flat or striated.
- It can be installed between floorings at different level by combining the aluminum profiles with different height each side.

MATERIALS AND TECHNICAL DETAILS

- Aluminum profiles with "L" shape, drilled on the base for the fixing screws.
- High performance rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 3 m. length (118.11")
- The rubber insert is delivered separately
- The whole system includes all the fixing screws**

OCCASIONAL

NOVOJUNTA® PRO ALUMINIO

Model registered as community design No 869892-5

- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
 - For joint widths up to 55 mm (2.16")
 - Movement allowed up to 22 mm. (0.86")
 - Replaceable rubber insert
 - Easy and safe fixing with screws (not included)
- Consult the screw recommendation in the technical file.
- Is delivered mounted with protective film

MATERIALS AND TECHNICAL DETAILS

- Aluminum profiles with "L" shape, drilled on the base for the fixing screws (not included)
- High performance rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Available in option firestop cords or membrane depending on the model (consult)
- Is delivered mounted with protective film
- For the 35 y 50 mm height models there are available alignment plates (for the installation) and reinforce pieces to increase its load support capacity.

- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- For joint widths up to 55 mm (2.16")
- Movement allowed up to 24 mm (0.94")
- Replaceable rubber insert
- Safe and easy fixing thanks to the perforated profiles and the fixing screws.
- Is delivered pre-mounted

MATERIALS AND TECHNICAL DETAILS

- Reinforced aluminum profiles with "L" shape, drilled on the base for the fixing screws, assembled by means of a ball-and-socket system which supports the rubber and allows the vertical movement.
- High performance rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 3 m. length (118.11")

- Replaceable rubber insert (2x40 mm/2x1.57")
- Safe and easy fixing thanks to the perforated profiles and the fixing screws.
- Is delivered pre-mounted

MATERIALS AND TECHNICAL DETAILS

- Reinforced aluminum profiles with "L" shape, drilled on the base for the fixing screws, assembled by means of a ball-and-socket system which supports the rubber and allows the vertical movement. On the side pieces there is a large reinforcement profile which improves the load capacity support and serves to accommodate the rubber profiles.
- Double high performance rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 3 m. length (118.11")
- The rubber insert is delivered in continuous rolls
- The whole system includes all the fixing screws*

* Fixing screws included ref. FIJAC8X60TG - 6 u/complete meter of joint

NOVOJUNTA® PRO XL 105

- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- For joint widths up to 105 mm (4.13")
- Movement allowed up to 20 mm (0.78")
- Replaceable rubber insert (2x50 mm)
- Safe and easy fixing thanks to the perforated profiles and the fixing screws.
- Is delivered pre-mounted

MATERIALS AND TECHNICAL DETAILS:

- Reinforced aluminum profiles with "L" shape, drilled on the base for the fixing screws, assembled by means of a ball-and-socket system which supports the rubber and allows the vertical movement. On the side pieces there is a large reinforcement profile which improves the load capacity support and serves to accommodate the rubber profiles.
- High performance double rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 3 m. length (118.11")
- The rubber insert is delivered in continuous rolls
- The whole system includes all the fixing screws*

NOVOJUNTA® PRO XL 130

- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- For joint widths up to 130 mm (5.11")
- Movement allowed up to 36 mm (1.41")
- Replaceable rubber insert (3X45 mm / 3x1.77")
- Safe and easy fixing thanks to the perforated profiles and the fixing screws.
- Is delivered pre-mounted

MATERIALS AND TECHNICAL DETAILS:

- Aluminum profiles with "L" shape, drilled on the base for the fixing screws and central support reinforced.
- High performance triple rubber insert with ability to absorb multidirectional movements. Excellent mechanical properties, great elasticity, good weatherability, UV and abrasion resistant, support thermal variations (-30°C / +120°C).
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 3 m. length (118.11")

NOVOJUNTA® PRO WP80

- Watertight expansion joint.
- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- For joint widths up to 80 mm (3.14")
- Movement allowed up to 60 mm (2.36")
- Supports semi-heavy loads.
- Ideal for outdoor parking lots of various heights, and structures that require waterproof joints to moisture, hygienic areas, etc.
- It is delivered unmounted.

MATERIALS AND TECHNICAL DETAILS:

- Made of steel structure
- Anti-vibration rubber.
- EPDM elastic insert with additional membrane WOLFIN IB.
- Interchangeable thermoplastic membranes compatible with bituminous sheets or PVC membranes
- Covered with 2 mm thickness AISI 304 stainless steel profiles.
- Resists atmospheric agents and thermal changes (-35°C hasta +120°C).
- Installation with fixing screws according to the installation instructions.
- The whole system includes all the fixing screws*
- Available fire barrier system in option

5. FLUSH WITH THE FLOORING ALL METAL

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

NOVOJUNTA® PRO AL30 RS

- Entirely made of aluminum expansion joint.
- Great durability. Does not require maintenance.
- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- For joint widths up to 30 mm (1.18")
- Movement allowed up to 9,4 mm (0.37")
- It is delivered mounted with protective film.

AVAILABLE FINISHES

Silver matt anodized

MATERIALS AND TECHNICAL DETAILS:

- Expansion joints consisting of sliding aluminum profiles.
- System of profiles with ability to absorb multidirectional movements
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 2.5 m. length (98.42")
- It is delivered mounted, with protective film

NOVOJUNTA® PRO MÓVIL

Model registered as community design No 869889-2

- Entirely made of aluminum expansion joint.
 - Great durability. Does not require maintenance.
 - Expansion joints in floorings (ceramics, concrete, terrace, stone...).
 - Striated non-slip surface
 - For joint widths up to 50 mm (1.96")
 - Movement allowed up to 10 mm (0.39")
 - It is delivered mounted with protective film
 - Easy and safe fixing with screws (not included)
- Consult the screw recommendation in the technical file.

MATERIALS AND TECHNICAL DETAILS:

- Aluminum profiles drilled on the base for the fixing screws (not included)
- System of profiles with ability to absorb multidirectional movements
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 2.5 m. length (98.42")
- It is delivered mounted, with protective film

NOVOJUNTA® PRO SISMO SU

- Ideal for areas with high seismic risk.
- Movement allowed up to 130 mm (5.11")
- For joint widths up to 100 mm (3.93")
- Entirely made of aluminum expansion joint.
- Great durability. Does not require maintenance.
- Expansion joints in floorings (ceramics, concrete, terrace, stone...).
- Installation con fixing screws (not included) . Consult screw recommendation in the technical file.
- Striated non-slip surface

AVAILABLE FINISHES

Anodized Silver matt

MATERIALS AND TECHNICAL DETAILS:

- Expansion joint consisting of sliding aluminum profiles in silver matt colour.
- System of profiles with ability to absorb multidirectional movements
- Available in option firestop cords or membrane depending on the model (consult)
- Profiles delivered in 2.5 m. length (98.42")
- It is delivered mounted, with protective film

8. STRUCTURAL JOINTS SYSTEM COMPLEMENTS

Installed as part of the System or even separately, each of the elements comprising the Structural Joints System possesses certain technical benefits and characteristics that define it.

1. Structural Joint Profile (Novojunta® Pro)

2. Novomembrana EPDM

3. Firestop cord

NOVOMEMBRANE EPDM

- Membrane made of high quality EPDM rubber with adhesive, designed to the expansion joints that require vapor barrier.
- It can be installed as a complement for expansion joint systems, or as an individual product.
- Great elasticity. Allow multi-directional movements.
- Waterproof material.
- Resistant to extreme temperatures (-30°C to +120°C), diluted acids or moderate concentrates, steam and hot water.
- Does not give off toxic smoke in the event of fire.
- Delivered in 1 lm or 20 lm rolls.

Novomembrana EPDM

FIRESTOP CORDS

- For standard and seismic joints in floors, walls and ceilings.
- Made of non combustible mineral fibers that do not rot, covered with a fiber glass net.
- Reaction to fire: Class M0 (fireproof).
- Fire resistance up to 240 minutes -without failure according to standards*.
- Tested according to European Standards (SIST EN 13501-2:2016)
- Do not absorb moisture.
- Insusceptible to the most common chemical agents
- Easy to install with non combustible adhesive
- Do not contain asbestos.
- Chemically neutral, does not cause toxic smoke emission in case of fire.
- Working temperature : 780° C
- Melting temperature : 1200° C

9. RETRACTING JOINTS IN CONCRETE FLOORS

NOVOJUNTA® CONCRETE

- Retracting joint for concrete floors to absorb the movements and prevent from cracking.
- It controls the expansion and retraction of the concrete in floors up to 24 cm (9.4") thick.
- Made of PVC. Available in heights of 40 mm (1.6") and 80 mm (3.15").
- Easy installation.
- It does not deteriorate over time.
- Once the work is finished, it is practically invisible.
- Perfect adherence.

MATERIALS AND TECHNICAL DETAILS

- Extruded PVC profile in cement grey colour.
- Approximate weight: 500 g/ml (80 mm / 3.15" model) and 250 g/ml (40 mm / 1.6" model).
- Profiles delivered in standard lengths of 2.5 m (98.4").
- Presentation in cardboard pallet boxes.

Novojunta® Hormigonado

INSTALLATION

1. Attach the profiles with some dabs of concrete every 60-80 cm (25-30").
2. Level and finish attachment leaving the upper third closest to the vertex free.
3. Cut the intersections using a mitre block and hacksaw to ensure the vertices coincide perfectly.
4. Do not place dabs of concrete at the intersections. The closest must be 20-25 cm (8-10") away.
5. The profiles are simply joined by inserting a rod or corrugated wire into the gaps in the joints.
6. Concrete pouring: pour either traditionally or by pumping.
7. Straight-edging and floating: do the straight-edging manually and then use the concrete vibrator. This process avoids deterioration of the joint.
8. Finish: leave the joint vertex free for a perfect finish.

REFERENCE	Width (a)	Visible Width (b)	Profile height (h)	Packaging

10. COVER PLATES

NOVOTAPAJUNTAS NDP

- It protects and embellishes the expansion joints on façades, walls and ceilings.
- Designed to cover joints from 10 to 130 mm wide (0.4"-5.12").
- Fast and easy to install thanks to its clip system, avoiding the use of adhesives and screws.
- Ideal for new constructions or rehabilitations.
- For indoors or outdoors.
- Ideal profile for all kind of projects: hospitals, malls, airports, hotels, residential buildings, etc.
- Made in PVC with anti-UV protection
- 4 profile models available width: 50, 70, 90 and 150 mm (2", 2.8", 3.5" and 5.9").
- Flat and angle models.
- Colours available: white (RAL 9016), beige (RAL 1015) and grey (RAL 7035).

INSTALLATION

1. Insert a clip in the bottom rail
2. Change the direction of clips to insert one after another.
3. Lay the profile in front of the gap.
4. Insert it until the clips are fixed.

MATERIALS AND TECHNICAL DETAILS

- Manufactured in PVC.
- The clips, manufactured in stainless steel, guarantee stable attachment yet permanent flexibility (spring effect). There are 4 models of clip available according to the width of joint to be covered.
- Profiles supplied in standard lengths of 3 m (118").
- The profile is supplied with the appropriate clip model and in the quantity required (5 clips for each 3-m / 118" profile).

NOVOTAPAJUNTAS NDA

- It protects and embellishes the expansion joints on façades, walls, roofs and floors with light traffic.
- Designed to cover joints from 10 to 150 mm wide (0.4"-5.9").
- Fast and easy to install thanks to its clip system, avoiding the use of adhesives and screws.
- Ideal for new constructions or rehabilitations.
- For indoors or outdoors.
- Ideal profile for all kind of projects: hospitals, malls, airports, hotels, residential buildings, etc.
- Made of aluminium in silver matt anodized finish
- 7 profile models available for flat installation: 50, 70, 90, 120, 140, 180 and 210 mm (2", 2.8", 3.5", 4.7", 5.5", 7.1" and 8.3").
- 4 profile models available in angle version: 50, 70, 90 and 120 mm (2", 2.8", 3.5" and 4.7").

MATERIALS AND TECHNICAL DETAILS

- Made of in anodized, extruded aluminium.
- The clips, made of stainless steel, guarantee stable attachment yet permanent flexibility (spring effect). There are 4 models of clips available according to the width of the expansion joint to be covered.
- Profiles supplied in standard lengths of 3 lm (118").
- The profile is delivered with the appropriate clip model and in the quantity required for installation.

INSTALLATION

1. Insert a clip.
2. Change the direction of clips to insert one after another.
3. Prepared for installation.
4. Final placement.

NOVOTAPAJUNTAS GTA

- This profile protects and embellishes the expansion joints on façades, walls, roofs and floors.
- Made of silver matt anodized aluminium (GTA 80 y GTA135) and naturel finition (GTA 180). Highly decorative.
- With non-slip striated visible side. It is an ideal profile for high-traffic areas such as hospitals, shopping centres, airports and hotels.
- Profiles supplied in standard lengths of 2.5 m (98.4").
- The 80-mm (3.15") model can also be supplied, on request, with incorporated adhesive for fast and easy installation, or with countersunk holes for the fixing screws (not included).
- The 135-mm (5.31") model can also be supplied with countersunk holes for the fixing screws (not included) .
- The 180-mm (7.1") model be supplied with countersunk holes for the fixing screws (not included)

11. MOVEMENT JOINTS FOR FLOORINGS

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

- Movement joint consisting of two aluminium profiles with a central body of EPDM micro-cellular rubber.
- Its main function is to prevent from cracking in floorings, absorbing the stresses (expansion and contraction) caused by thermal variations.
- Available for paving up to 125 mm (4.9") thick. For other thicknesses, ask us.
- Profiles delivered in standard lengths of 2.5 m (98.4").
- Supplied with protective film on the visible face.
- Available in black, grey and marble (up to 30 mm / 1.2" high). Also in brown, white and beige in the slimm model (4.5 mm / 0.18" height).

GENERAL RECOMMENDATIONS FOR INSTALLATION

- For outdoor floorings, it is recommended closing regular areas up to 16 m² (172.22 ft²) maximum, with a distance between expansion joints not exceeding 2.5-5 lineal meters (98.42 - 196.85")
- For indoor floorings, with lower thermal change, it is recommended closing regular areas up to 40 m² (430.56 ft²) maximum, with a distance between expansion joints not exceeding 8 lineal meters (314.96")
- The particularities of each installation should be taken into account.

NOVOJUNTA® METALLIC PERIMETER

- Profile for perimeter expansion joints consisting of an aluminium profile with a body of EPDM micro-cellular rubber.
- Its main function is to prevent from cracking in floorings, absorbing the stresses (expansion and contraction) caused by thermal variations.
- Available for floorings up to 12 mm (0.47") thickness.
- Profiles delivered in standard lengths of 2.5 m (98.4").
- Supplied with protective film on the visible face.
- Available in black colour.

Novojunta® Metallic Perimetral

- Movement joint consisting of two metal profiles with a central body of EPDM micro-cellular rubber.
- Available in stainless steel AISI-304, high brightness finish, or in silver matt anodized or natural aluminium.
- This movement joint is highly decorative, since it has a decorative plate on its visible face that masks the inner EPDM body.
- Its main function is to prevent from cracking in floorings, absorbing the stresses (expansion and contraction) caused by thermal variations.
- Available for floorings up to 126 mm (4.9") thickness. Other options on request.
- Profiles supplied in standard lengths of 2.5 m (98.4").
- Supplied with protective film on the visible face.

NOVOJUNTA® DECOR XL

- Movement joint consisting of two aluminium profiles with a central body of EPDM micro-cellular rubber.
- This movement joint is highly decorative, since it has a silver matt cover plate that masks the inner EPDM body.
- Its main function is to prevent from cracking in floorings, absorbing the stresses (expansion and contraction) caused by thermal variations.
- The central EPDM micro-cellular rubber body, 20 mm (0.79") width, allows a great capacity of movement.
- Due to its movement capacity, is also recommended installed in façades.
- Profiles delivered in standard lengths of 2.5 m (98.4").
- Delivered with protective film on the visible face.

Novojunta® Decor XL

GENERAL RECOMMENDATIONS FOR INSTALLATION

- For outdoor floorings, it is recommended closing regular areas up to 16 m² (172.22 ft²) maximum, with a distance between expansion joints not exceeding 2.5-5 lineal meters (98.42 - 196.85")
- For indoor floorings, with lower thermal change, it is recommended closing regular areas up to 40 m² (430.56 ft²) maximum, with a distance between expansion joints not exceeding 8 lineal meters (314.96")
- The particularities of each installation should be taken into account.

NOVOJUNTA® METALLIC FLECHA

- Arrow-shaped movement joint, designed to be installed with high thickness floorings
- It consists of two natural aluminium profiles and a central body of EPDM micro-cellular rubber, with an excellent capacity for absorbing the contractions and expansions of the flooring.
- We recommend installing it slightly below the level of the flooring, to enable the floor to be polished.
- Profiles supplied in standard lengths of 2.5 m (98.4").
- Supplied with protective film on the visible face.

GENERAL RECOMMENDATIONS FOR INSTALLATION

- For outdoor floorings, it is recommended closing regular areas up to 16 m² (172.22 ft²) maximum, with a distance between expansion joints not exceeding 2.5-5 lineal meters (98.42 - 196.85")
- For indoor floorings, with lower thermal change, it is recommended closing regular areas up to 40 m² (430.56 ft²) maximum, with a distance between expansion joints not exceeding 8 lineal meters (314.96")
- The particularities of each installation should be taken into account.

NOVOJUNTA® 1 PVC

- Movement joint with arrow shape made of co-extruded PVC. Consists of one rigid PVC part that efficiently protects the flooring edges, and another flexible PVC part that enables surface tensions to be absorbed.
- It consists of two natural aluminium profiles and a central body of EPDM micro-cellular rubber, with an excellent capacity for absorbing the contractions and expansions of the flooring.
- Suitable to support all kind of traffic.
- Available in up to 6 colours: white, grey, beige, brown, black and transparent.
- Profiles delivered in standard lengths of 2.5 m (98.4").
- If the floor will be polished, we recommend installing it slightly below the pavement level..

GENERAL RECOMMENDATIONS FOR INSTALLATION

- For outdoor floorings, it is recommended closing regular areas up to 16 m² (172.22 ft²) maximum, with a distance between expansion joints not exceeding 2.5-5 lineal meters (98.42 - 196.85")
- For indoor floorings, with lower thermal change, it is recommended closing regular areas up to 40 m² (430.56 ft²) maximum, with a distance between expansion joints not exceeding 8 lineal meters (314.96")
- The particularities of each installation should be taken into account.

12. PROFILES AND ACCESSORIES

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

NOVOPARED-SUELO ASTRA® KOMBU

EXCLUSIVE MATERIAL

- This is a multi-purpose profile, and can be installed as a finish to protect and decorate the borders of ceramic cladding, as a paving separator, or as a counter top finish.
- ASTRA® Kombu is a profile suitable for all kind of environments, both indoors / outdoors and in humid or submerged environments.
- The material offers excellent resistance to impact, meaning it can reliably be used as a profile in paving and borders.
- The colors in the range are stable and durable outdoors.
- Innovative fluted finish with non-slip characteristics that improves its behavior in the outdoors environments.
- Installation profile before work, glued or screwed.
- Profiles supplied in standard lengths of 2.5 m (98.4")

NOVOTRI ECLIPSE® 3 USES

- Polyvalent profile, made of anodized aluminum, which can be placed as a decorative listel, minimalist skirting board or decorative ceiling listel in plasterboard or tiled walls.
- The front flap protects the edge of the piece that goes with and acts like a guide for its installation with materials of different thicknesses.
- Its flat base with a slight slope facilitates the cleaning and allows its installation as a skirting or top ending.
- Optionally a LED strip can be installed in the interior hollow, providing the profile with a double functionality and a high decorative value.
- Available in matt silver, off-white and matt black anod. aluminium and 70 mm (2.77").
- Profiles supplied in standard lengths of 2.5 m (98.4").

13. SKIRTINGS

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

NOVORODAPIE ECLIPSE® SP

- Profile made of aluminum to be installed as a skirting with all types of coatings.
- Its geometry of straight lines allows to cover the perimeter joint and facilitates cleaning.
- It is a highly versatile and reversible profile. It can be placed, in addition to a skirting board, as an intermediate or upper finish on the wall in two different positions.
- Optionally a LED strip can be installed (not included) in any of the interior holes, providing the profile with a double functionality and a high decorative value and being able to choose between a more discreet or more visible lighting.
- Available in anod, matt silver in height 80 mm and with end caps available.
- Profiles supplied in standard lengths of 2.5 m (98.4").

NOVORODAPIE ECLIPSE®

- Profile made of aluminum to be installed as a skirting in plasterboard walls.
- Thanks to its geometry, the profile protects the bottom edge of the wall, generating an innovative hollow effect like if the wall was suspended in the air.
- Its simple lines, finished with a small curve, create a smooth surface that avoids the accumulation of dirtiness and makes easy the cleaning.
- In addition to be a skirting, this profile can also be a finish the top of the wall.
- Optionally a LED strip can be installed in the interior hollow, providing the profile with a double functionality and a high decorative value.
- Available in matt silver, off-white and matt black anod. aluminium and 70 mm (2.77")
- Profiles supplied in standard lengths of 2.5 m (98.4").

NOVOPELDAÑO ECLIPSE®

*Notice

- Stair nosing profile, made of aluminum, designed to protect and decorate tiled stairs.
- Its design, with a hidden hollow, allows the installation of any LED strip chosen by the installer without need of difusor.
- Its visible side improves the slip resistance value of the stair.
- Thanks to its geometry, the slight slope allows the evacuation of water outside, avoids the accumulation of dirt and makes easy the cleaning.
- Solution in one piece with easy and fast installation.
- Suitable for outdoor
- Special cover available.
- Product tested against impacts and loading capacity
- Profiles supplied in standard lengths of 2.5 m (39.4" or 98.4").

NOVOPLETINA LUMINA®

- Plate profile made of anodized aluminium with a photoluminescent strip that serves as a guide in case of sudden absence of light.
- It can be installed as a flooring separator, in entrances, stairs or ramps and also as a luminous guide in walls.
- The photoluminescent strip is classified as Class B according to Spanish UNE 23035-4 standard, and exceeds widely the values required
- It can be delivered with countersunk holes for screw attachment.
- Profiles supplied in standard lengths of 2.5 m (98.4").

NOVOPLETINA® ALUMINIUM

- Striated plate profile made in anodized matt silver aluminum designed to be installed in stairs, ramps or in areas where the safety against falls wants to be assured.
- It supports intense traffic
- Acts as a guide for the blinded or partially sighted and also serves to signalize eventual dangers.
- This highly resistant profile is delivered with countersunk holes and is easy to install on finished floorings by using fixing screws.
- Profiles supplied in standard lengths of 2.5 m (98.4").

3 mm (0.12")	35 mm (1.40")	10 u.	NPLAL35PLAGU

NOVOPLETINA® STAINLESS STEEL

- Decorative plate made of stainless steel, suitable for its placement in ramps and as stair nosing.
- Its non-slip surface improves the value of slip resistance of the pavement which complements. This helps to fulfill with the Spanish Technical Building Code (CTE).
- It can be installed without work so it's ideal for rehabilitation or reform works. It is also ideal for public areas such as airports, malls, hospitals, etc. and for homes.
- It is available including adhesive. Ready to install.
- Available in stainless steel brushed. Covered with protective film.

16. TECHNICAL ENTRANCE MATS

TECHNICAL ENTRANCE MATS

- The Novomat® entrance mats are an effective barrier to avoid the entry of dust, dampness and dirt, providing the maximum protection and durability to the flooring.
- Specially designed to contain dirt and prevent it from being tracked into the floors of public buildings: Airports, hospitals, hotels, offices, mall centres, shops, leisure venues...
- Its robust aluminium structure connected by high resistant synthetic rubber joints that avoid noises and prevent from sliding. This joint system allows the mat to be rolled easily and facilitates the evacuation of dust and moisture.
- Enabling commercial traffic and helping to save the accessibility standards for people with reduced mobility
- Disponibles en kit, con marco cortado a medida o bajo pedido con la geometría deseada y los complementos en opción. En acabados caucho o moqueta textil en gama de color.
- Available in standards size kit including frame cut to measure or under request they can be customize at the desired geometry. With two possible different finishes, rubber or carpet in different colours.

BUDGET

Novomat® custom made

- Novomat® 8 and Novomat® 12 have a larger aluminium visible side. They are reinforced and their striated visible side increases the non-slip value. Specially designed to be installed on already finished surfaces with the Novonivel® complement.
- Novomat® 15 and Novomat® 20 have a narrow design to get a perfect integration. These models are ideal for areas with high pedestrian traffic like shopping malls or any kind of public buildings. Due to its narrow design and the height of the profiles, these mats are more capable to retain the dirt, resulting in cost savings of cleaning and maintenance.

HOW TO REQUEST A NOVOMAT® ENTRANCE MAT?

Ask EMAC® for an entrance mat order form. There are two options:

option A REGULAR SHAPES

1. Indicate the inside dimensions of the well or the mat dimensions (width A x depth B).
2. Indicate if the frame is needed.
3. Indicate if there are doors and their position in relation to the entrance mat.
4. Indicate the direction of the traffic flow.
5. Choose the height of the profile and the finish of the entrance mat.
6. Indicate if you want customized nameplate.

option B IRREGULAR SHAPES

1. Do a drawing with the shape of the entrance mat and all its dimensions.
2. Indicate if the frame is needed.
3. Indicate if there are doors and their position in relation to the entrance mat.
4. Indicate the direction of the traffic flow.
5. Choose the height of the profile and the finish of the entrance mat.
6. A charge will be applied as appropriate depending on the features of the entrance mat requested
6. Indicate if you want customized nameplate.

The maximum delivery length is 3 meters. For larger sizes, the entrance mats are made in several pieces. We recommend not requesting the joint in the central area, as it is the area with more traffic. The best option is leaving the joints between the pieces nearest to the sides.

material	size	code
Aluminium+ Textile carpet	h: 8 mm	NMAMH8MT
	h: 12 mm	NMAMH12MT
	h: 15 mm	NMAMH15MT
	h: 20 mm	NMAMH20MT
Aluminium+ Rubber	h: 8 mm	NMAMH8CN
	h: 12 mm	NMAMH12CN
	h: 15 mm	NMAMH15CN
	h: 20 mm	NMAMH120CN

Our technical team is at your total disposal to help you with the election and sizing of the entrance mat. For more information please contact tecnico@emac.es

17. DESIGN, DEVELOPMENT AND TECHNICAL SUPPORT

EMAC® DESIGN AND DEVELOPMENT

EMAC® has its own R&D team that designs, develops and improves trims for the sole purpose of satisfying our customers' requirements. The EMAC® R&D department is made up of professionals with an extensive experience and excellent technical skills who are constantly learning and fully committed to the project. The team, backed by significant investment in collaboration with ground-breaking technology institutes, is able to provide technically competitive products of high quality.

The department has Rapid Prototyping Machine that allow us testing the models before its final development, reducing periods of execution and detect possible improvements. Once the products are manufactured, they are subjected to various tests that

guaranty their maximum quality and functionality fulfilling the current normative.

In the past years, we have carried out tests of traction-compression, loading, corrosion, alloy compositions, slip resistance, stain resistance, abrasion resistance. . .

The careful choice of materials with which EMAC® profiles are manufactured is the main reason for the high quality of these products. Comprehensive tests are carried out, at EMAC® and/or Specialized Technical Intitutes, on their composition, strength, colour and other factors. EMAC® profiles are made

of high quality raw materials such as Stailes steel AISI 304, Aluminium (Qualicoat, Qualanoad), PVC, Maxi, methacrylate, wood or brass. Check the technical details of each material at the technical files of each product.

Investing in protecting our effort of Research, Development and Innovation through 550 patents and more than 30 proprietary names and brands by which our most popular product ranges are known. All of this is done in order to protect our products and the value of our brand, which is deeply consolidated in the market.

All of our products have their Technical File. Where you can find general information, technical details, tests carried out, methods for fitting them and guidelines for maintaining and cleaning each one of them. Pay special attention to the information contained in the Technical File to avoid damaging the products and to keep up proper maintenance.

TECHNICAL SUPPORT

At EMAC® we want to help you carry out your Project by choosing always the best solutions. If you have any queries or requests about our products, do not hesitate to contact us at tecnico@emac.es and tell us about your project. Our technical department staff will assist you with professionalism and without delay. They are always at your disposal and without any compromise. We offer you our help with:

- Project plans: personalized and calculated study on the most suitable layout of expansion joints.
- Advise on rehabilitation and renovation works.
- Troubleshooting for structural joints.
- General enquiries: functionality, cleaning, fitting, etc. of our products

In our interest to share our knowledge and promote skills between the professionals in the sector, we have developed several technical documents that are at your disposal. At this Technical Documents, we cover topics of interest such as how to fit expansion joints on facades, the concept of slip and how it is applied according to the CTE standards, and supporting documents to choose the perfect EMAC® solution for expansion joints.

At the same time, to offer you a more detailed information you may find a Technical File for each product and material. In which you can find general information, technical details, tests carried out, methods for fitting them and guidelines for maintaining and cleaning each one of them. Pay special attention to the information contained in the Technical File to avoid damaging the products and to keep up proper maintenance.

You can download the Technical Files at our website www.emac.es, you can consult the information about each product at our online catalogue or ask for that information by e-mail at: tecnico@emac.es.
